

The Touch Controller is an innovative and attractive control unit with 7" display. Its large touch screen offers straightforward programming and an excellent graphic display.

Using the Touch Controller by Aquatronica, you can monitor the chemical parameters of water and set programs to manage the peripheral units connected to it quite simply and quickly.

You can connect the device to the network via LAN or WIFI through supplied Wi-fi key.

The user interface is user-friendly. The work of a team of graphic designers and experts in the field of interface design and man-machine interfacing is focused on the user-friendliness of the system, assessing the reactions and the specific uses of customers over time to make each operation straightforward and immediate.

The network connections allow you to view the parameters and to manage the aquarium via Internet; they system also manages the automatic forwarding of e-mails for reports and alarms. It is compatible with Windows™ ed Apple™ . The Touch controller is equipped with a LAN connection, two USB ports and SD card reader.

TECHNICAL SPECIFICATION		
ITEM	DESCRIPTION	CAPACITY
1	DIMENSIONS WITH BRACKET	190,5x155x35,5cm
2	DIMENSIONS WITHOU BRACKET	180,5x128,5x34,5 cm
3	DISPLAY	7" colour touch screen
4	CONSUMPTION	< 5 W with display on, without USB devices, connected
5	POWER SUPPLY	12V dc with external power supply 110/120V – 50 Hhz
6	CONNECTIONS	USB, Ethernet, Wi-fi
7	SOFTWARE FUCTIONS	Touch screen interface, web interface, notification mails, webservice for custom
8	ADATA FILLING	USB, SD, internal memory
9	COMPATIBILITY	Windows™, Macintosh™
